Recent Statements by Citizens Electoral Council's
Leader Craig Isherwood on:

Defeating the fraud of global warming; and solving the world's *real* problems

2009.12.17

Copenhagen chains Prometheus to murder mankind

The draft Copenhagen treaty's ban on the use of nuclear and hydro-electric power to reduce carbon dioxide emissions is to ensure nobody can escape the British oligarchy's plan to reduce world human population by 3-5 billion people, Citizens Electoral Council leader Craig Isherwood said today.

Page 83 of the 181-page treaty, section 50 states: [Nationally appropriate mitigation actions shall not include technologies that have adverse impacts on the environment, including, inter alia, nuclear power and large-scale hydro-electric power.]

"Once again, the British oligarchy—the modern-day gods of Olympus—are chaining Prometheus," Mr Isherwood said, referring to Aeschylus' Greek tragedy *Prometheus Bound*, in which Zeus commanded that the Titan Prometheus be chained to a rock for eternity for stealing fire from the gods and giving it to mankind, as technology for economic development.

"Prince Philip founded the WorldWide Fund for Nature (WWF) in 1961 with the Nazi Prince Bernhard of the Netherlands specifically to reduce human population; in recent days both his wife and idiot son have pushed hard to salvage an outcome at Copenhagen which binds nations to reduce the carbon emissions that are a natural product of life.

"But by demanding that nuclear and hydro—the only sources of base-load power that do not produce emissions—are not part of the mix, they seek to ensure that the only way CO₂ emissions can be reduced, is by reducing the total number of lives—mass murder."

Remember, Mr Isherwood said, that the WWF is one of the key funders of the con-artists at the Climatic Research Unit of Britain's East Anglia University:

"Everything about this process is fraud, fraud, fraud," he charged.

"Let's get back to reality: CO₂ is a naturally-occurring gas, a product of all carbon-based life-forms, which plants love; the earth's climate has always and will always change, determined by the sun; just as life on planet earth is more powerful than the non-life of rocks etc, human cognition is more powerful than life, and it is the scientific discoveries humans make that produce the new technologies that give us that power, and allow us to survive and prosper; nuclear power is humanity's best hope for the future, not because it doesn't emit CO₂, but because it is our greatest achievement in energy-density, and has the potential to be applied globally to produce electricity, process heat, radioactive isotopes for health and industry, and will raise the living standards of Africa and the other desperately-poor regions of the world; nuclear power's greatest promise, is that it is the pathway to fusion power, the power of the sun on earth, which will solve humanity's power and resource problems indefinitely."

Mr Isherwood observed, "Of course, that's why genocidalists hate nuclear power, but that's why we love it—it's Promethean fire for the people."

He concluded, "All people want a future, but we have to fight for it; that's what we are doing, and I urge everybody to join us."

FREE ENERGY Package

Free* package includes a DVD, *EIR* magazine and the *New Citizen* on "Global Warming is a Fraud". To order call toll-free 1800 636 432 or send this coupon to: CEC, PO Box 376, Coburg, Victoria, 3058 and leave ALL your details.

A new year's revolution: Build the high speed Australian ring rail

“In this New Year, Australia must urgently take a lead from the Chinese, and build a high speed rail network to conquer Australia’s ‘tyranny of distance’ and open up vast areas of Australia for future economic development,” Citizens Electoral Council leader Craig Isherwood said today.

Mr Isherwood said that China has just commenced a regular, scheduled train service on the high speed railway between central China’s Wuhan and the southern coast city of Guangzhou (formerly, the British Canton). The 1069 kilometre journey, which used to take 10.5 hours, can be now completed in three hours. The train’s average speed was 350 kilometres per hour, reaching at one point a speed of 394 km/h. For comparison, the average speed for high speed trains in Japan is 243 km/h and in France, 277 km/h.

“This would be brilliant technology for Australia!” exclaimed Mr Isherwood.

“In 2010, we need to start building Professor Lance Endersbee’s 1997 proposal for an Australian Ring Rail, which is a rail system to connect Melbourne through inland Victoria, New South Wales and Queensland, to Darwin, and then from Darwin to Perth, Western Australia. His proposal means that we could take a trip from Melbourne to Darwin, via inland towns of Shepparton (Vic), Dubbo (NSW), Narrabri (NSW), Moree (NSW), Roma (Qld), Charleville (Qld) through to Darwin, a distance of about 4,000 kilometres in around 11 hours.

“Australia with its large open plains means that, even without improvements in technology, these high speed trains could develop a higher average speed than the Chinese are achieving now. And, we have not even discussed the potential for magnetic levitation train systems which travel even faster!

“Lance Endersbee designed the Ring Rail as a new fast freight system to service the growing trade between Australia and East and Southeast Asia with seven key objectives which would increase the poten-

tial for real growth in Australia’s physical economy:

- Access for Australian traders to the busy Asian maritime network;
- access for Australian rural industries to Asian markets and supermarkets through regular, fast deliveries to major Asian centres;
- quicker deliveries by Australian manufactures to Asian industries and markets;
- rail access to the large oil and gas resources of the Timor Sea;
- rail connections within the Ring Rail to assist the development of metal smelting and refining (so we don’t just ship raw materials overseas!);
- the continuing development of northern Australia, with national benefits overall;
- national integration of economic activity.

“Australian leaders are pathetic on real national building projects”, Mr Isherwood declared.

“In September, Chinese officials said they planned to build 42 high speed rail lines by 2012 with a total length of 12,920 kilometres as part of efforts to spur economic growth. When completed the high speed rail lines will service areas including about 90% of China’s population. This is part of an ambitious rail development program aimed at increasing the national network from the current 85,295 kilometres to 120,700.”

Mr Isherwood stated, “Building the Australia Ring Rail is a crucially important, genuine nation building step, which must be combined with the other urgent measures I outlined in my 10th December webcast for Australia’s mission:

“We must break from the British Commonwealth and its anti development, raw material looting policies that have destroyed our physical economy; dump the foreign Queen as our head of state and establish a true republic, and then nationalise our huge raw materials deposits; and using major rail infrastructure, establish new farms and industries to export manufactured goods and produce into Asia.”

Australian Ring Rail Proposal
To serve major development projects

- Oil, gas, mining, minerals and metals projects
- Horticultural projects to serve export markets

Australia & India should cooperate on thorium nuclear power

Citizens Electoral Council leader Craig Isherwood today called for Australia to foster a closer relationship with India, around the joint development of a thorium-based nuclear power industry.

“Nuclear power is the future of humanity, and Australia and India enjoy the world’s largest reserves of its most promising fuel, thorium,” Mr Isherwood said.

“It is a beautiful opportunity for our two nations to collaborate on the development of a widely-applied thorium nuclear power industry, which can be both a boon to our own nations in terms of power generation and water desalination, and a gift to the world.”

In a national webcast on 10th December, the CEC National Secretary highlighted the benefits of thorium:

“For power, we will develop a world-class nuclear power industry using our unmatched supplies of the basic nuclear fuels, uranium and thorium. To not do so would be the height of idiocy. The rest of the world is clearly going nuclear, so we can either join them, or sit here sweltering in the dark. Even more, we can actually play a leading role in developing this industry worldwide, by not only processing our uranium and thorium for export, but by developing a whole new, high-technology nuclear industry, including whole nuclear

plants for export...

“We also have the world’s largest resources of thorium, ahead of India which is second. Now, once we throw off the shackles of British monetarism, these two minerals, in particular, open up an entire new world for ourselves, and for our neighbours...”

“New generations of nuclear power plants have been designed, known as pebble bed reactors, which are absolutely safe and meltdown-proof. And thorium is a great fuel for reactors, because almost all natural thorium is useable in a reactor compared with 0.7% of uranium. India has a rapidly-developing research program into thorium reactors, and we should collaborate with her on that.”

In further comments Mr Isherwood said that thorium offers three other significant benefits above using uranium as a fuel source. Firstly, thorium yields 40 times more energy per unit of mass compared with uranium; secondly the thorium nuclear cycle requires free high energy neutrons to start the nuclear chain reaction, hence surplus plutonium from old nuclear war-heads, which supply such neutrons, could be burnt up in the thorium reactors and finally, the thorium fuel cycle does not produce proliferable materials that can be used to build nuclear weapons.

Abbott joins Prince Philip’s green genocide army

2010.01.19

Opportunist Opposition leader Tony Abbott has named the man who aspires to be the world’s biggest mass murderer, Prince Philip, as his inspiration for his recent embrace of greenie policies, including his plan to complete the Howard government initiated shut down of the Murray Darling Basin, and to draft 15,000 Australians into a sub minimum wage “green” army.

Prince Philip and former Nazi SS officer Prince Bernhard of the Netherlands co founded the World Wildlife Fund (WWF) in 1961 to reduce human population; the WWF has raised enormous sums of money from multinational corporations like BP, Shell, Rio Tinto, and Unilever to lock up great tracts of land, first in Africa, and then all over the world, so that the land could not be used by locals for the kind of economic development they required to raise their living standards.

Prince Philip fantasised aloud about population reduction in August 1988, telling Deutsche Presse Agentur, “In the event that I am reincarnated, I would like to return as a deadly virus, in order to contribute something to solve overpopulation.”

Tony Abbott told ABC radio on 16th December that his idea that there was a natural fit between the conservation movement and “conservative” politics was inspired by “no less a person than Prince Philip” being the “inaugural president or patron at one of the big international environmental organisations [sic].”

Citizens Electoral Council leader Craig Isherwood today blasted Abbott for his promotion of green genocide:

“Tony Abbott’s declared intention is to continue Prince Philip’s greenie destruction of Australia,” Mr Isherwood said.

“The Murray Darling Basin is Australia’s food bowl,

and green genocidalists like Tim Flannery and the other quacks in Prince Philip’s WWF funded ‘Wentworth Group’ of scientists have peddled lies about global warming and ‘permanent drought’ to shut it down—because it is the nation’s food bowl.

“Abbott’s fellow Royal sycophant John Howard began the destruction of the Basin, by squashing options like the Clarence River Scheme to increase the volume of available water, and instead initiating water trading and buy backs designed to drive farms out of production—that’s what Abbott intends to complete.”

The CEC National Secretary warned people not to be fooled by Abbott’s opposition to the Emissions Trading Scheme last year, which was opportunistic, and in fact forced on him by the shift in public opinion against climate change policies.

The truth, he said, is that the supposedly devout Catholic’s support of environmentalism fails a fundamental moral test:

“You can’t be for the common good of humanity, and support Prince Philip’s green genocide,” he insisted.

“Humanity’s future is at stake: green policies have been used by the British oligarchy to deindustrialise nations and smash their agricultural production, which has left the world with a worsening food shortage.

“To shut down Australia’s food bowl at this time, is criminal and immoral.”

Mr Isherwood concluded, “The good news is that the mass opposition of Australians forced Abbott into line and defeated the ETS in December, so I call on all Australians to work with the CEC to crush green genocide once and for all.”

To defeat the Money Power and guarantee Australia's economic future:

Re-establish a true national bank

Fifty years ago today—14th January, 1960—Prime Minister Robert Menzies committed an act of treachery on behalf of his private banker friends, and neutered Australia's national bank, by removing the Commonwealth Bank's central banking powers, and reducing it to a mere trading and savings bank.

The powerful central banking function, by which the Commonwealth Bank had regulated and leashed the private banks, was renamed the Reserve Bank of Australia, and placed under the control of a private board of directors; its first Governor, H.C. "Nugget" Coombs, boasted that he was a member of "the international freemasonry of central bankers".

The City of London-directed private banker fraternity, including Menzies' best friend, financier Staniforth Rick- etson of J.B. Were & Son, whom the patriots in the early Labor Party called the "Money Power", had finally achieved what they had strived for since the Commonwealth Bank's establishment in 1911—the end of sovereign government control over banking.

Today, Citizens Electoral Council leader Craig Isher- wood called on Australians to rejoin "old" Labor's fight against the Money Power, and demand the re-establishment of a true national bank like the Commonwealth Bank.

"If Australia is to have a prosperous economic future, we must harness the nation's credit to build large-scale water, power and transport infrastructure, and foster essential agricultural and manufacturing industries, which means we need a true national bank, owned and run by the govern- ment for the common good," he said.

"The early Labor Party fought against the Money Power's private control of banking, because they understood that a government only had true sovereignty, if it exercised ultimate control over the monetary system through a national bank.

"Thanks to the influence of pro-American forces in the early Labor Party and among the writers of our Constitu- tion, Australia is a unique country, in that we are the only nation outside of the U.S. to have had a true, Hamiltoni- an-style national bank, which was expatriate American and Commonwealth Bank architect King O'Malley's intention when he created it, going so far as to proclaim, 'I am the Hamilton of Australia...'" [Alexander Hamilton was the 1st U.S. Treasury Secretary under President George Washing- ton, and the inventor of national banking.]

In the two periods when the Commonwealth Bank was able to function as a true national bank under govern- ment control and directing finance for the public good, 1912-1923 (under the governorship of Sir Denison Miller) and 1941-1945 (under the Labor government during WWII) , its achievements were stunning:

- * The Trans-Australian Railway;
- * Financing the national wool clip in WWI;
- * Stopping a run on the private banks during WWI;
- * Financing Australia's miraculous war-time economic mobilisation in WWII;
- * Zero war-time inflation during WWII.

In 2001, the CEC published its book, *What Australia Must Do to Survive the Depression*, which includes ready-to-enact legislation for a new national bank, the *Commonwealth National Credit Bank Bill*, and an explanation for how a new national bank would function to be as successful as its predecessor.

Mr Isherwood concluded with a challenge: "Next year, 2011, is the 100th anniversary of the 22nd of December, 1911 passage of the *Commonwealth Bank Act*, the single most important piece of legislation in our history," he said.

"Join the CEC's fight to re-establish a national bank, and let us set that anniversary as the deadline to achieve it. "God knows we need it," he said.
