

# LaRouche Youth Spearhead Bush, Cheney Defeat in U.S. Elections!

by Kelly-ann Paul

An earthquake hit U.S. and world politics in the November 7, 2006 U.S. Congressional elections, when the Democratic Party seized control of both houses of the Congress from the crazy U.S. President George Bush and his controller, the mad-dog sociopath, Vice President Dick Cheney.

The landslide victory was orchestrated by Democratic Party statesman and physical economist Lyndon LaRouche, and the few hundred members of his underfunded, "raggedy pants elite" in the LaRouche Youth Movement (LYM), over sabotage by the party's top official, bankers' boy Howard Dean (whom you may remember for his wild scream when he lost his pre-selection for U.S. President in 2004). Despite Americans' widespread hatred for Bush and Cheney, the Democrats were poised to either lose the whole campaign outright, or, at best, to squeak out a narrow win in the lower house, the 435-member House of Representatives. But, in the campaign's closing weeks, LaRouche directed his LYM to intervene on hundreds of university campuses with the intent to catalyze a political "mass effect" among millions of previously apathetic youth. This campus-centred intervention sparked the huge turnout

among 18-35 year olds which sealed the Democratic victory, and so the Democrats picked up 30 seats in the House—the most since 1974—and took control of the 100-member U.S. Senate, 51-49.

Almost the entire LaRouche Youth Movement from Australia was in the U.S. for the course of the campaign.

## The Youth Role Documented

A dozen or so post-election analyses by different organisations all concluded that the victory was secured by the turnout of some 2 million more 18-35 year old voters than usual, who voted overwhelmingly Democratic. Only LaRouche and his LYM had campaigned among this crucial layer, as Democratic insiders admitted.

This unique LYM role on November 7 is documented in the January 5, 2007 issue of *Executive Intelligence Review* magazine. Were there any doubts as to what the LYM had done on November 7, they were demolished in the December 12 special run-off election held for the U.S. Congressional seat in the 23<sup>rd</sup> Congressional District around San Antonio, Texas.

The Democratic Party would have won another 20-30 House seats had it not been for the sabotage of party boss Howard Dean, who refused to put any party money or effort into dozens and

The LaRouche Youth Movement (LYM) galvanised the landslide Democratic Party defeat of looney George Bush and mad-dog Cheney on November 7. (r.) Democratic Party statesman and economist Lyndon H. LaRouche, Jr. with Australian members of his LYM.

dozens of winnable races. Typical was the San Antonio race, where former Democratic Congressman Ciro Rodriguez ran against 7-time incumbent Henry Bonilla, a Republican closely allied with George W. Bush. Dean still had \$6 million in his party coffers, but, not only did he not aid Rodriguez, he even ordered the university Democrats in the area not to campaign for him, nor to help a LYM squad which moved into the area to campaign for Rodriguez. Polls showed Rodriguez down by over 20% when the campaign started, but, due to his own fighting spirit and the LYM's campaigning, he steadily closed the gap. The LYM's activity inspired Bill Clinton, who is enormously popular among

American youth, to come in and campaign for Rodriguez in the final days. When the votes were counted on Dec. 12, a stunned Democratic Party saw that Bonilla had been crushed, 55% to 45%.

Statistical analyses presented in that same January 5 *EIR* proved that, once again, the crucial margins of victory were provided by the youth vote, particularly by students from the district's campuses where the LYM had concentrated its efforts. Most of these youth had not previously known that the election was even taking place.

The November 7 election, wrote LaRouche in his article, "Johannes Kepler and the Democratic Challenge: The New Politics", in the December 8, 2006

*EIR*, has inaugurated an entire new era in U.S. and global politics, in which an optimistic, fighting young adult generation has emerged to prominence, a generation which is now rapidly replacing the demoralised, pessimistic Baby Boomer generation. This new generation is beginning to bring the Baby Boomers back to life, and will dominate politics for the coming 50 years.

## Cheney Has to Go!

The youth-led "New Politics" have unleashed an earthquake in the now-Democratic party controlled House and Senate. LaRouche's voice echoes louder than ever in the halls of the Congress, sparking fierce bipartisan Democratic and Repub-

lican opposition to the insane Cheney/Bush war in Iraq from a Congress which had groveled before them up to November 7. The next step, LaRouche has stressed, is to impeach Cheney, and then to either impeach Bush as well, or, to at least put him under "responsible adult supervision". Only so, will the U.S. and the world be able to deal with the already-cascading disintegration of the genocidal Anglo-Dutch imperial system of "globalisation". For more on LaRouche's strategic perspective, see the excerpts from his powerful January 11, 2007 international webcast on p. 2, which was notable for its intense dialogue between LaRouche and members of the newly-elected Congress.

## Howard's "Pro-Nuclear" Fraud

by Robert Barwick

The kindest thing one can say about John Howard's recent "pro-nuclear" government study, is that it is wildly incompetent. More truthfully, his report, "Uranium Mining, Processing and Nuclear Energy—Opportunities for Australia?", were better titled, "Uranium Mining—Opportunities for Multinationals!" Because the report makes clear that the main purpose of Howard's recent "pro-nuclear" crusade is not to bring Australia into the Nuclear Age, but, with raw materials prices now skyrocketing, to open up Australia's immense uranium reserves (38% of the world's total) to the likes of the Queen's Rio Tinto, BHP Billiton, etc., just as they are using our country as one big quarry for coal and iron ore.

Here are merely a few points which demonstrate the report's breathtaking quackery:

**\*The report:** "Nuclear power is likely to be between 20 and 50 percent more costly to produce

than power from a new coal-fired plant at current fossil fuel prices in Australia."

**The reality:** Even presuming that were true, so what? Only an idiot thinks that you only measure nuclear power by "cost competitiveness" to coal. Moving into nuclear power opens up an extraordinary range of technologies by which our national productivity will soar, by far swamping the bean-counting "costs" of building nuclear plants per se. The notion of prohibitive "cost factors" permeates the entire report.

**\*The report:** "Downstream steps of uranium conversion, enrichment and fuel fabrication could add a further \$1.8 billion of value annually if all Australian uranium was processed domestically. However, high commercial and technology barriers could make market entry difficult ... there may be little real opportunity for Australian companies to extend profitably into these areas."

**The reality:** What Howard is

really saying, is that, if Australia ever does manage to go nuclear (and with no help from the government!), he wants it to be beholden for its nuclear fuel to the main suppliers for such fuel worldwide, of which there are only three. Furthermore, dozens and dozens of countries (including many "Third World" nations) are planning hundreds of nuclear plants, all of which could be a market for Australian-produced fuel, of which, again, we own 38% of the world's presently-accessible supplies, 70% of which are found in just the Olympic Dam mine in South Australia.

**\*The report:** "The earliest that nuclear electricity could be delivered to the grid would be 10 years, with 15 years more probable."

**The reality:** Nonsense. The average construction time for a nuclear plant in Japan over the past decades has been five years, just as it was for the entire western world before the industry was shackled with quack, greenie-inspired "safety regulations",

whose sole purpose was to stop nuclear power. Furthermore, if Howard can ram through such hugely-unpopular things as his endless stream of police-state laws, I.R. reforms, etc., he could easily begin a nuclear industry in Australia overnight, particularly given the recent Channel 9 poll which showed over 50% support for the construction of an Australian nuclear power plant (no thanks to Howard, but to the CEC's relentless campaigning for nuclear).

**\*The report:** "Disposal of high-level waste including spent nuclear fuel remains an issue..."

**The reality:** Hogwash. In reality, some 99% of all "nuclear waste" can, and should be recycled. In fact, "nuclear waste" is one of the highest grade "ores" in the world, containing large amounts of useful radioisotopes and industrial precious metals such as palladium, rhodium, and ruthenium, in concentrations tens to thousands of times higher than their average content in the Earth's crust. Only a fool would

want to bury them.

**To sum up:** The report is based upon the statistical methodology of accountants, which may be fine for computing taxes, but which rules out what is unique to human beings: our ability to constantly discover new principles of the physical universe, thus drastically cheapening the cost of production, and raising the standard of living.

For instance, it is only with the widespread use of cheap, plentiful nuclear power for nuclear desalination, that we are going to finally solve our continent's immense water problems, something which Howard has no interest in, because it would ruin the increasing ability of the private financiers who own him, to control all available water supplies, and to charge us through the nose for them. His actual intentions for nuclear power in Australia are revealed in his plans to send a mere 15 (!) Australians abroad to study nuclear science, while all our domestic training programs have been shut down or gutted,

Howard whistles a "pro-nuclear" tune so his mates in the Queen's multinationals can loot our uranium deposits—the largest in the world. If you really want nuclear power, join the Citizens Electoral Council!

such as the University of NSW's excellent School of Nuclear Engineering, whose Prof. Leslie Kemeny, for instance, was one of the world's leading specialists in nuclear fusion.

# “The Old Economics Is Dead, the New Economics Must Begin”

Lyndon LaRouche addressed an international webcast on “The Old Economics Is Dead, The New Economics Must Begin,” in Washington, D.C. on Jan. 11, 2007. Numerous members of the incoming U.S. House of Representatives and U.S. Senate and their staffs watched his presentation, and their questions dominated the Q&A at its conclusion.

Lyndon H. LaRouche

I think we should begin by declaring this the Year of *Bel Canto* Choral Singing [applause] which is one of the more important weapons available to us, to change the world, and to transform people who look glum and miserable on the streets, into actually smiling and happy human beings.

But we have to justify that happiness at the same time. We can proclaim it, we can declare for it, we can call for it, but we must make it possible.

Now, what has to be done to save civilisation, global civilisation, not just here, must be done largely within a span of the coming 90 days, or less. Of course, the first thing we must do, in order to do the other things which we must do, we must put the Vice President into some form of retirement, involuntary or otherwise, and we must put the President of the United States under compassionate care. Because, without the removal of these two impediments, civilization will not continue. You see this madman, who’s the unshackled

all modern history. Because this time, while there are comparable regional cases, such as the 14th-Century New Dark Age, never before has the entire planet been threatened by virtual extinction of its culture and mass depopulation, as now. So therefore, this is unprecedented.

What we’re going to have to do, is what the Congress, in general presently, hasn’t the slightest intention of doing. But it must be done, if the nation and civilisation are to survive. There is no force outside the United States, which has the intellectual capability and influence to do what must be done, in reorganising an international monetary-financial system and economic system, which is bankrupt beyond repair. The world will not continue as a civilised world under the present international monetary-financial system, and the prevalent policies which have evolved in

Maestro John Sigerson leads a presentation of the LaRouche Youth Movement in the great Bach motet, “Jesu Meine Freude”. The LYM’s bel canto singing, on the streets and in the U.S. Congress, is a vital part of the “New Politics” inaugurated in the November 7<sup>th</sup> U.S. election.

had a residue of the legacy of President Franklin Roosevelt. For example, look back at the historical setting which leads into the present: When Roosevelt came into the Presidency, virtually with a couple of exceptions, every President since the assassination of President McKinley, had been a national disaster. We allied ourselves with our traditional worst enemy, the United Kingdom, the Anglo-Dutch Liberal system. ...

So from 1901, with the date of the assassination of McKinley, until the entry of Franklin Roosevelt into the White House in early March of 1933, our country was run, largely dominated by a corrupt clique centered on London and what was called Wall Street. These were the guys who, at the time that Roosevelt went into office in 1933, the leaders in Wall Street, such as the grandfather of the current President of the United States, were pro-Hitler! It was Prescott Bush, the granddaddy of George W. Bush, who signed the paper issued to a bank in Germany to release U.S.-controlled funds to revitalise financially the Nazi Party in time for Hitler to be made the dictator of Germany. This was typical of the wealthy families associated with Wall Street, all tied to London.

And they weren’t doing it on a U.S. initiative. The initiative came from the Bank of England, from the head of the Bank of England, Montagu Norman, in which the British intended to set up a new geopolitical war, on the continent of Europe, focussed upon the issue of an attack on the Soviet Union, and this war was to demolish Continental Europe, as it had not been thoroughly demolished during World War I. This was a geopolitical move by the Anglo-

Dutch financial Liberal circles of Europe. And we had, on Wall Street, and in our political system, we had the patsies who were going along with that.

Roosevelt changed that! Franklin Roosevelt returned the United States to the tradition of the Founders. ... *it’s the revival of the principle of the U.S. Constitution*, which had emerged in particular, in response to 1763, when the British Empire was first created at the Peace of Paris in February 1763. ...

That is our heritage: a heritage expressed by the American Revolution, by the formation of the Constitution, by the all-powerful, superior policy of our Constitution, the Preamble of the Constitution, which is the *fundamental law of our nation for all true patriots!* Because it’s a commitment, which I referred to, of course, in this recent paper I’ve written on the question of Capital Budgets [“The Lost Art of the Capital Budget,” *EIR*, Jan. 12, 2007].

All right. So, what Roosevelt did, was to respond to a deeply embedded tradition. Now, some of us know that we weren’t born yesterday. That’s not talking about our biological youth, it’s the fact that our culture is transmitted, and enriched from generation to generation, as a body of ideas which belong to the specific qualities of the human mind, not to the physical characteristics of the body. And

these ideas, which reach far back in history, in the form of the transmission of language and other things, determine what is lying within us. So that you could have a period where, of generations, from 1901, with the assassination of McKinley, to 1933, with the entry of Franklin Roosevelt into office in March, you have a period, a span in which the most rotten kind of ideas, the most rotten cultural things—like the *Charleston* [dance], of all things! It’s the orthopedic surgeon’s income-promotion game.

But the ideas, which were planted in the United States in particular, in New England and then in Pennsylvania and elsewhere in the 1630s, around the Winthrops and later the Mathers, these ideas which

were the ideas that formed our Constitution, with fresh enrichment from Leibniz and others from Europe, these ideas are the ideas of the United States. *This is our soul. This is our character.* We are the perfect sovereign [nation], who, despite the fact we have a lot of fat oligarchs in our country, we do not have an oligarchical tradition. You don’t bow when Von So-und-So comes by your house! You don’t fall in awe, when someone says, “The Queen!” You say, “I know people with that sexual preference,” you know.

You do not, because you have

Philosopher, statesman and scientist Gottfried Wilhelm Leibniz (1646-1716) was the founder of modern physical economy, and inspired LaRouche’s own work in the field. Leibniz’s notion of the “pursuit of happiness” (agape) was adopted by the American Founding Fathers as the “general welfare”.

U.S. President George W. Bush’s granddaddy, Wall St. banker Prescott Bush, helped finance Hitler’s takeover of Germany in 1933. The family hasn’t improved any since.

The sadistic anglophile Lynne Cheney (r.) whips up Dick to torture the world (that’s her husband, the U.S. VP, on the left, smiling as usual).

husband of a terrible wife—they have such things in history—you’re going to have war. You’re going to have a war spreading throughout the entire region from Turkey and so forth, into Somalia, and beyond. The whole world will blow up.

We are entering a period of the greatest financial crisis in

the world, as from the United States and elsewhere, over a period from about 1970 to the present time.

### Oligarchy vs. Republicanism

We went, during that period, from a nation, which, despite all our errors and follies, still

Brueghel’s vision of the madness and chaos of the Dark Age of the 14th Century, unleashed by the bankers of Venice—the predecessors (and creators) of today’s Anglo-Dutch financial oligarchy.

The Bank of England, the centerpiece of the tyrannical system of “central banking” which dominates the world.

U.S. President Franklin Delano Roosevelt (1933-1945) fought those whom he called the “economic royalists” of the Wall St./Bank of England-centred international financial oligarchy, on behalf of the “general welfare” of the “forgotten men and women”.

### The Preamble to the U.S. Constitution.

*We the people of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common Defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.*

The U.S. Constitution is unique, in that its Preamble (a portion of the original document is shown at right), which is set before the body of the Constitution itself as its guiding principle, specifies that the U.S. government must “promote the general Welfare” of all of its citizens, both those living today, as well as their posterity. Though savagely violated in recent decades, that is still the ruling law of the U.S., and it was adopted by “old Labor” here as the notion of the “Common Good”.

LaRouche's "The Lost Art of the Capital Budget" paper is being intensively studied in the U.S. Congress. Only an idiot would lump together long-term capital spending for infrastructure, with the annual budget process, as do Howard and Costello, for instance. A "balanced budget" like that is the oligarchy's trick to make sure no vital national projects are ever built.

a sense: *We are an independent people.* The personality of the individual is sacred, and that personality has an equal opportunity. *That's us!* This European stuff, which we moved to get away from, that is, we had to build a republic for the sake of all humanity, which was as free as possible, and as far distant as possible from the European oligarchical tradition. And that's what we are. And whenever you have, in a time of crisis, an able leadership, our people have, so far, been able to respond to an able leadership, to rebuild this nation, even after it has spent drunken decades in a gutter of liberalism. ...

So therefore, we have a government which has not been trained by experience to live up to the measure of its responsibility on this crisis occasion. We have no President in sight. We have a "thing" called a President. A sick man, who's called a President. A sick, *wicked* man who's called a President. We have a Vice President, who should be called the President of Vice. He's a criminal. He's evil. But he's only a stooge for his wife, who is more evil. If you really look at what she is, and what she represents. They represent, not the United States, they represent their friends in London, who own them.

So therefore, our Presidency has been damaged. There is no sense of a Presidential leadership in the nation generally, except in the bones, so to speak, of some of our leading people, and in the population generally. Therefore, we have an important thing: We're not a parliamentary system. And the centre of what has to be done, is what can be done through, largely, the major committees of the House of Representatives, as backed by a flood of representatives recently elected to the House, who in the majority represent a force which can be rallied

behind the leadership typified in the House by the major committees, relevant major committees, starting with the Ways and Means Committee, and others.

So it's on these people, that we depend to have an interim transition, toward a *real* Presidency, which can act as a *real* Presidency according to our Constitution, which can, then, with cooperation with the Congress as a whole, *fix* what must be fixed in the United States, within the next 90 days, to fix the future of humanity as a whole.

**The Greatest Economic Crisis in History**

I can assure you: There's no country, there's no part of world outside the United States, in which that capacity for that quality of necessary leadership exists. There are many useful and good people, and useful governments in other parts of the world. *But they don't have our Constitutional system.* And it's only under our Constitutional system, that we can, so to speak, turn on a dime, to deal with the greatest financial and economic crisis in *all modern history*: a global crisis, which is coming on, now. The world is ready to go into general bankruptcy. ... What're you going to do? Well, you have to change something. You have to change a policy. Well, the policy is this: Since 1970-71, we have made a transition, inspired by the 68ers, to go from an agro-industrial economy, producing food, not biofuels—and I mean, "biofuels," the people who support that nonsense—so, we've gone to a post-industrial ideology. We no longer produce for ourselves: We shipped our jobs out to cheap labour in other countries, where their conditions of life *there*, on the average, are becoming worse. ...

As a matter of fact, you have probably seen in the Triple

Curve [Figure 1], which is now again, published in the edition of this report on Capital Budget, in *EIR*: that over the recent period, most emphatically since about 1977, the productivity of the United States, per capita, has been going *down* at an accelerating rate. That is, the physical productivity, per capita, per square kilometer, of the United States has been collapsing, actually since about 1971-72, but visibly in terms of statistics, per capita, since 1977. That is: Since 1977, take the lower 80% of family-income brackets, *their physical income*, the physical income measured in terms of physical services and other things, *their income has been collapsing*, at an accelerating rate. You have a section of the upper 20%, that is, within the upper 3% of family-income brackets, which is super-rich without actually earning anything. And those who are working, in the lower 80%, are getting nothing for doing all the work that's available.

But in the meantime, we have changed the composition of the economy, from a productive economy, to a failed economy, a so-called post-industrial society economy, a services economy. And therefore, the services economy employment is largely fake makework. It's the dole, it's like the Roman dole, of the Roman Empire. It's a fake.

**Go Nuclear!**

Now, our problem is, is to restore the United States, in particular, to a major agro-industrial power based on high rates of technological progress, and which will require a very large investment in nuclear fission power. We are going to have to essentially eliminate much of the reliance on other modes of power, and eliminate all these biofuel, and other pieces of nonsense, that will actually destroy the area, and destroy the food supply and destroy the population. We have to go to a high-technology, high-energy-flux-density power system. We have to do this.

Take the case of the Western states, west of the Mississippi. You have a large area that runs from Dakota, down into Texas, West Texas in particular, it's called the Ogallala aquifer. This is the major water supply for that whole region. This area is now subsiding, especially in the southern part in the United States. This whole area of the United States is doomed, unless we reverse it. Why? Because the combination of fossil water in that area, and the water supply flowing into the aquifer, is such that it's *less* than the rate at which we consume the water in the aquifer. And therefore, you have, in West Texas, for example, and similar areas, you have a very serious subsidence of the territory. A desertification, as a result of this. You have a loss of the potential productivity in a large part of the areas serviced by the Ogallala aquifer.

You have, around the world, southern India, and other parts of the world, living on what's called "fossil water." That is, water which was embedded in the crust of the Earth, or the upper crust of the Earth, since about 2 million years. For example, in southern India, one of the largest reserves of water

in India, in the Deccan region of southern India, is fossil water, 2 million years old, left after the melting of the great glaciation.

So now, what's happened, much of the world is living on fossil water. We have to make water. Now, that has two meanings. In this case, take the case of Australia. Australia has abundant water, and much desert inside. Now, how's that possible? Well, the water's outside, it's around Australia. It's saline. And Australia has a *wonderful* opportunity to use this water! In the oceans around it! But how do you use it? How do you desalinate it? Well, the only efficient means we have for desalinating water, and cleaning up water, on a mass scale, is *nuclear fission power*. It's not the best one for the future, but for the time being, this is what you do.

Also, the fuel problem: If you have the proper type of nuclear fission reactors, you can take water—which we should be producing by aid of nuclear fission—we can take water, and we can get fuel from water, through high-temperature, high-flux-density temperature operations, through nuclear power. We can generate fuels, hydrogen-based fuels, from water, using certain types of nuclear reactors. That means,

**"Take the case of Australia. Australia has abundant water, and much desert inside. Now, how's that possible? Well, the water's outside, it's around Australia. It's saline. And Australia has a wonderful opportunity to use this water! In the oceans around it! But how do you use it? How do you desalinate it? Well, the only efficient means we have for desalinating water, and cleaning up water, on a mass scale, is nuclear fission power. It's not the best one for the future, but for the time being, this is what you do."**

in every part of the country, if you have a sufficient water supply, even dirty water, you can process it. What you can do, is you can turn that water into hydrogen-based fuels, and similar derivatives. You don't have to bring oil from Saudi Arabia. You can make a better fuel right here at home!

**Fusion: Technology for the Future**

Now, this is the direction in which we have to go. We also have to go for the future, down the line, we have raw materials management problems on the planet as a whole. We have rich sources of raw materials in Northern Asia, and parts of Russia. We can generate in that area, a great improvement in the supply of raw materials, at acceptable prices, for Asia as a whole, an area of growing population, and need for growth, technological progress: We can do that.

But to do that, we have to go into thermonuclear fusion *management techniques* for our materials, to reprocess and process materials in a creative way, to ensure that the supply of raw materials, at a reasonable price, reasonable cost, is available to every person on the planet: We can do that.

So don't talk about what seems practical because it was done in the past. Progress is existence. Progress is the only future worth having. Therefore, we have to think in terms of an economy which is oriented toward progress, toward technological progress. And to go *away* from the post-industrial society, which has been killing us. *Reject the post-industrial society!* Go beyond to the future society, the future-econo-

LaRouche's Triple Curve Function illustrates the hyperinflationary spiral now underway, where the real physical economy (the bottom curve) is looted to service speculation (financial aggregates). At a certain point, the government printing presses (monetary aggregates) can't run fast enough to "turn over" the financial aggregates (stocks, bonds, derivatives, etc.) When these latter two curves cross, a hyperinflationary explosion like 1923 Germany is unleashed.

my society.

Which is what Roosevelt, in a sense, did. He mobilised the people, who were poor, destitute, who'd lost skills, put them to work. And moved, such that, from a nation which had been broken, and destitute, in 1931-33, Roosevelt produced a nation which represented a power beyond the imagination of anybody who had existed before that time! Producing 50,000 planes a year! For war. We won the war! We saved the world from Hitler! Yeah, we had partners in it, but without our role in that, we

wouldn't have saved the world. Britain would have joined Hitler, but for the United States, but for Franklin Roosevelt. It was Franklin Roosevelt who got the British to abandon their intention to support and cut a deal with Adolf Hitler! It was Roosevelt! His leadership. And the development of the economy, mobilised under his leadership, which made us the greatest power the world had ever seen. We did it, under Roosevelt's leadership.

We can do it, again. We can do it, with this broken, depleted population. We can do it, again.

**What Went Wrong**

Now: The problem is, that most people today, particularly Baby Boomers, were trained in the post-war period, not to think like that. You had the various things like Dr. Spock, who turned your baby into a monster, and gave you a recipe to do it: "Just feed your baby this soup every day, and it will become a monster." And it did.

So therefore, we have to look at what's wrong, spiritually and intellectually, as well as physically. Because the physical wrongs are a result of intellectual wrongs, mental wrongs. We make mistakes, we make the wrong choice, we vote for the wrong candidate. We vote for the wrong policy. We support the wrong idea. And that's how we get into trouble: Because we are a nation; according to our Constitution, the people can actually control their government, through their influence on the selection of people, and behavior of people in government. We are not an oligarchical society. And when

the people move, and have leaders that enable them to move in a unified way, we can accomplish miracles. And we're going to have to pull a miracle out of the hat, right now.

So that's the task before us.

Now, what does this mean? The problem with the Baby-Boomer generation—and this was intentional—the day Roosevelt died, the people who came into power, were largely people who were determined to destroy Roosevelt's life's work. They could not completely destroy it, because of what had happened—the effect on our returning veterans, for example. There were limitations on what the new administrations could do, to destroy the United States from the inside. ...

**'Conspiracy Theories'**

The problem lies, in a sense, in this direction: that the Baby-Boomer generation was conditioned not to believe in truth. They call it, they're against conspiracy theories. Well, all progress in humanity is done by a conspiracy! People agree to change the way they behave, as in technological progress, as in changing the character of institutions, as going for full adult education programs, developing professionals, bringing in new technologies, changing the relations among nations. These are all *ideas* around which people *organize*

Continued Page 4

Only large-scale construction of nuclear reactors, such as the ultra-safe pebble bed reactor pictured above, can solve our severe power and water shortages.

The sort of land subsidence pictured here is due to drawing down supplies of non-replenishable "fossil water" from underground aquifers. Courtesy Lance Endersbee.

# EIR Releases Blockbuster on "Biofoolery", Destruction of Australian, Canadian Wheat Boards

by Rhys McGuckin

The January 26, 2007 issue of *Executive Intelligence Review* (EIR) devastates the present plot to devote a substantial, accelerating portion of the world's food supply to producing ethanol on which to run motor vehicles. The 29-page exposé opens with the following:

"It shouldn't take a specialist to realise that the current fad of 'biofuels' is a scientific fraud, roughly equivalent to Jonathan Swift's depiction of scientists trying to produce light from excrement. Sure, it's a scientific challenge—but it's absolutely insane. The reality is that humanity's demand for clean and plentiful energy can only be met by an advance into the nuclear realm of fission and fusion power. As we reveal below, the 'biofuel' alternative is not only a rip-off, but also it will never solve the energy crisis, and will starve people in the meantime."

"The impact of biofuels mania on the food chain, is now hitting as food shocks at points all along world supply lines. This results from interaction with pre-existing crises of grain stocks, marginalised agriculture, monoculture cropping, speculation, and the many other features of glo-

balisation."

To take only two small examples from EIR's exposé, the U.S. typically accounts for over 40% of the world's annual corn production, and a whopping 70% of its exports, yet in 2006, fully 20% of the entire U.S. corn harvest went into ethanol distilleries, and there are plans to more than double that percentage in the near-term. This literally steals food from the mouths of starving people worldwide, as in Mexico, where African-style malnutrition already exists and where, in the last two weeks, the prices of tortillas (made from corn, and the single biggest item in Mexicans' diets), skyrocketed by 50%. Mexico used to be self-sufficient in corn, but, under globalisation, it now has to import corn from the U.S., but that corn is now being juiced into ethanol.

### Assaults on Canadian, Australian Wheat Farmers

A highlight of EIR's "biofools" package is its explosive 6-page exposé on the British Crown's simultaneous destruction of the Canadian and Australian Wheat Boards. Together, Canada and Australia account for as much as 65% of the world's annual wheat exports, as in 2004-2005, and average a combined 35%—the single

largest component of the world wheat trade. Thus, whoever seizes control over the two countries' wheat exports can dictate prices and supplies to the entire world. And that "whoever", the articles document, is the international financial oligarchy known as the "Club of the Isles", which is centered in the British and Dutch royal houses, which originated with Britain's King Edward VII (d. 1910), known as the "Lord of the Isles".

As of 1997, the Club held an estimated \$US 9 trillion in assets, which have grown phenomenally since then, and include such behemoths as, in mining, Rio Tinto (whose largest stockholder is Queen Elizabeth II), BHP Billiton, Anglo-American, DeBeers, Barrick Gold; in finance, the Bank of England, Hongkong and Shanghai Banking Corp. (HSBC), JP Morgan & Co., Lazard Bros., N.M. Rothschild & Sons; and, in food, Cargill, Archer Daniels Midland (ADM), Louis Dreyfus, Bunge and Born, etc.

Australia is run informally by the Crown, in particular through the Mont Pelerin Society (est. 1947), whose founding money was put up by Crown financier Harley Drayton, and whose fronts here include the H.R. Nicholls Society, the Cen-

tre for Independent (sic) Studies, the Sydney Institute, ACIL Tasman, etc. These have provided the whole ideology (and even the legislation) of "privatisation", "deregulation", and "competition policy" which have increasingly wrecked Australia since the Hawke/Keating years, and particularly under Howard. However the Crown's control over Canada is even more direct, and is exercised through Canada's very own Privy Council, which reports directly to the Queen's Privy Council in London, and which has directed Canadian PM Stephen Harper to wreck the CWB.

Howard's December 2006 elimination of the AWB's single desk export monopoly, the articles demonstrate, never had anything to do with kick-backs in the Iraq "oil-for-food" scandal, a scandal launched in the first place by a complaint of "Canada" (i.e. the Canadian Privy Council) to the United Nations. Just a few weeks before Howard's attack on the AWB, Canada's Governor General made an almost-unprecedented public intervention into Canadian politics against the continued existence of the CWB, reminiscent of when the Queen's poodle, Governor General John Cur, sacked Gough Whitlam. Despite opposition from Australian farmers,

The January 26, 2007 issue of LaRouche's *Executive Intelligence Review*.

Howard's destruction of the AWB has proceeded further than PM Harper's success against the CWB. Indeed, a Coalition source told a CEC supporter that the talk in Canberra was that the AWB had to be wrecked, so that the larger CWB could be, also.

For the CWB/AWB section of EIR's Biofools package, see <http://www.cecaust.com.au>. The full January 26 EIR is available from the CEC.

## The Old Economics Is Dead, the New Economics Must Begin (cont.)

Continued from Page 3

to make things better. Everything good in society, is done by a conspiracy. Everything bad in society, is done either by abrasion, or by conspiracy theories! If you don't believe in conspiracy theories, you're a mental case,

Prince Philip (the intelligent-looking one on the left) and his cousin. Great apes and oligarchs can't think, but real human beings are created *imago viva Dei*, "in the living image of God the Creator", with the ability to discover and apply fundamental new principles of the Universe.

and need adult supervision!

Because that's the way history has worked. History works on the basis of ideas! The difference between a chimpanzee and a human being is ideas! Chimpanzees don't have ideas. They can't think. If you want to find a society free of the

authoritarian personality, look at a cage full of rhesus monkeys. They are true existentialists.

The problem is, therefore, by denying the importance of principle, the existence of principle, what we did, is we gave a generation which is now empowered, in our institutions, a generation which is empowered to say, "I don't care about the future. I don't like my children. I don't like my grandchildren. I'm tired of supporting them. I don't want to pay for their education. I don't care what they think. I have to live out the remaining few years of my life, in what I consider comfort. I don't care about what comes after me! I care about what I feel in the here and now, today!" Short-term, quick gratification. The sexual behavior and marriage patterns of the American Baby Boomer.

### A New Generation Rises

What we have now, the thing we have, which is demonstrated by singing choruses in *bel canto* [Italian for "beautiful sound"—ed.] mode on the streets of the United States, and also in Europe: what we have, is the affirmation of a generation of young adults. These young adults are the same generation which was organized by Benjamin Franklin from about 1763 on, when he knew the nation was in danger; organized by him, which made the American Revolution, fought the American Revolution, led the fighting of the American

The Baby Boomer generation was brainwashed against science, technology and physical production, in favour of sex, drugs, and rock n' roll.

Revolution, and created the Constitution of the United States. The generation of Alexander Hamilton, for example: a product of Benjamin Franklin's mobilisation of the young adult generation, no older than the young people of today, between 18 and 35 years of age.

In all history, all important changes for the better, and sometimes for the worse, in the history of nations, have come from that generation of people who are past adolescence in their character, their outlook on life. They are adults in their orientation, and they're looking forward to two generations, approximately 50 years, of their coming life. These are the kind of people who, when they grow older, look at their grandchildren as their investment in the future.

The Baby Boomer, by this kind of operation that was done to them, in the post-war period by the Congress for Cultural Freedom in Europe and in similar things here, was destroyed. They were destroyed. They destroyed their moral sense that the human being is not a physical thing alone. It also represents a quality of being, a personality, which is immortal. The part that pertains to ideas, of the type that no animal can generate. And if you lose that sense of immortality, then you don't have a sense of living in

The great scientist (and "old geezer") Benjamin Franklin led the American Revolution, but most of the Revolution's other leaders were youth in their early 20s.

the future after your own death. If you can say, "I can live in the future, after my own death," then you *have* morality, you *have* reason. And you can live, and fight, and risk your life. Because it's not your mortal life that you're defending, *it's your future existence*, as the embodiment of ideas, and the transmission of ideas that makes the future function. And that's what's lacking in that generation.

And that is what we're doing,

and what you saw reflected in the results of the recent midterm election. The role, the *crucial, marginal role* played by the increasing turnout of young Americans between 18 and 35 years of age, in two groups—first of all, the 18 to 25, and then the 25 to 35. And if you look at the statistics on the voting, and the turnout patterns with this last election compared with the previous elections, you see there has been a fundamental, revolutionary change, in which a *new adult generation* is providing the basis for new leadership in the policy-making of the nation as a whole, and the policy-making of the world.

And therefore, we get the old Baby Boomers out of their slumbers and their fat dreams, and we tell them, "C'mon! Come back to life. Don't be dead all your life. Come back to life. Commit yourself to the future of this nation." ...
